List of Tables

Table	Page
1. Some secondary metabolites discovered from marine fungi	8
2. Types of ascospore appendage ontogeny	12
3. Fungi isolated from materials, collected in Thailand and other countries and used for the molecular study	29
4. Cultures obtained from various culture collections and used for the molecular study	30
5. Primers used for PCR and DNA sequencing	33
6. Comparisons of morphological characteristics of <i>Torpedospora</i> and <i>Swampomyces</i> species	43
7. Comparisons of morphological features between <i>Torpedospora</i> , <i>Swampomyces</i> and other related orders in the Hypocreomycetidae, Sordariomycetes	45
8. Summary of results from <i>Torpedospora</i> and <i>Swampomyces</i> analyses	51
9. The morphological characteristics of six <i>Remispora</i> species at light and ultrastructural levels	94
10. Comparison of the morphological characters used for delineation the fungi in the orders Sordariales, Xylariales, Hypocreales (Bionectriaceae) and Lulworthiales	165
11. Marine unitunicate Ascomycota await family and ordinal assignment at the molecular level	175
12. The Halosphaeriales await assignment at the molecular level	177

List of Figures

Figure	Page
1. Drawings of ascospores to show wall layers and spore appendage ontogenies	14
2. Diagrams showing structure of the genes and set of primers	26
3. Morphological features of <i>Torpedospora</i> species	41
4. Morphological features of <i>Swampomyces</i> species	42
5. One of six MPTs inferred from SSU rRNA sequences, generated with maximum parsimony analysis (<i>Torpedospora</i> alone)	54
6. One of 12 MPTs inferred from SSU rRNA sequences with additional taxa, generated with maximum parsimony analysis (<i>Torpedospora</i> alone)	55
7. One of four MPTs inferred from LSU rRNA sequences, generated with maximum parsimony analysis (<i>Torpedospora</i> alone)	57
8. One of ten MPTs inferred from combined SSU+LSU rRNA sequences, generated with maximum parsimony analysis (<i>Torpedospora</i> alone)	58
9. One of two MPTs inferred from combined beta-tubulin+ITS1-5.8S-ITS2 sequences, generated with maximum parsimony analysis (<i>Torpedospora</i> alone)	60

List of Figures (Continued)

Figure	Page
10. The 50% majority consensus tree inferred from SSU rRNA sequences, generated with maximum parsimony analysis <i>(Torpedospora+Swampomyces)</i>	62
11. The 50% majority consensus tree inferred from LSU rRNA sequences, generated with maximum parsimony analysis <i>(Torpedospora+ Swampomyces)</i>	63
12. One of two MPTs inferred from combined SSU+LSU rRNA sequences, generated with maximum parsimony analysis <i>(Torpedospora+ Swampomyces)</i>	65
13. A single MPT inferred from combined SSU+LSU rRNA sequences, generated with weighted maximum parsimony analysis <i>(Torpedospora + Swampomyces)</i>	66
14. Morphological features of <i>Haligena</i> species	76
15. One of two MPTs inferred from LSU rRNA sequences of the genus <i>Haligena</i> , generated with weighted maximum parsimony analysis (step matrix)	81
16. Bayesian analysis of partial LSU rRNA sequences of the genus <i>Haligena</i>	82
17. Morphological features of <i>Naufragella</i> and <i>Remispora</i> species	93

List of Figures (Continued)

Figure	Page
18. One of two MPTs inferred from LSU rRNA sequences of the genera <i>Naufragella</i> and <i>Remispora</i> , generated with maximum parsimony analysis	101
19. Morphological features of <i>Marinospora</i> , <i>Ocostaspora</i> , <i>Nautosphaeria</i> , <i>Lautisporopsis</i> and <i>Carbosphaerella</i>	110
20. One of two MPTs inferred from LSU rRNA sequences of <i>Marinospora</i> , <i>Ocostaspora</i> and <i>Nautosphaeria</i> , generated with maximum parsimony analysis	114
21. Morphological features of <i>Marinosphaera mangrovei</i>	122
22. Morphological features of <i>Pedumispora rhizophorae</i> and <i>Bathyascus tropicalis</i>	123
23. One of ten MPTs inferred from SSU rRNA sequences of <i>Bathyascus</i> sp., generated with maximum parsimony analysis	127
24. One of two MPTs inferred from combined SSU+LSU rRNA sequences of <i>Bathyascus</i> sp., generated with maximum parsimony analysis	128
25. One of 36 MPTs inferred from SSU rRNA sequences of <i>Marinosphaera mangrovei</i> , generated with maximum parsimony analysis	130

List of Figures (Continued)

Figure	Page
26. One of two MPTs inferred from LSU rRNA sequences of <i>Marinosphaera mangrovei</i> , generated with maximum parsimony analysis	131
27. One of two MPTs inferred from combined SSU+LSU rRNA sequences of <i>Marinosphaera mangrovei</i> with <i>Ceratocystis</i> sequences, generated with maximum parsimony analysis	133
28. One of two MPTs inferred from combined SSU+LSU rRNA sequences of <i>Marinosphaera mangrovei</i> without <i>Ceratocystis</i> sequences, generated with maximum parsimony analysis	134
29. One of 20 MPTs inferred from LSU rRNA sequences of <i>Pedumispora rhizophorae</i> , generated with maximum parsimony analysis	135
30. A single MPT inferred from LSU rRNA sequences of <i>Pedumispora rhizophorae</i> with less taxa of the Xylariales, generated with maximum parsimony analysis	137
31. Scheme of proposed evolutionary trends within the Halosphaeriaceae	149
32. One of three MPTs inferred from LSU rRNA sequences of all halosphaerialean taxa, generated with maximum parsimony analysis	154
33. One of three MPTs inferred from LSU rRNA sequences of all halosphaerialean taxa, generated with maximum parsimony analysis, with different type of appendage ontogenies indicated	155

List of Figures (Continued)

Figure		Page
34.	One of three MPTs inferred from LSU rRNA sequences of all halosphaerialean taxa, generated with maximum parsimony analysis, with presence or absence of catenophyses and periphyses indicated	161
35.	One of three MPTs inferred from LSU rRNA sequences of all halosphaerialean taxa, generated with maximum parsimony analysis, with presence of asci and ascus structures indicated	162
36.	One of three MPTs inferred from LSU rRNA sequences of different marine ascomycete lineages, generated with maximum parsimony analysis	172
37.	A cladogram inferred from LSU rRNA sequences of marine ascomycetes, representing lineages in terrestrial and marine, generated with maximum parsimony analysis	173
