SCHOOL ATTENDANCE IN PATTANI PROVINCE OF THAILAND

Sunaree Suwanro1
Phattrawan Tongkumchum2

12Department of Mathematics and Computer Science, Faculty of Science and Technology,
Prince of Songkla University, Pattani, Thailand

This paper examines the situation of child labor and school attendance by gender and religion (Muslim or other) in sub districts of Pattani Province. Data were obtained from the 2000 Population Census of Thailand. The outcome is the proportion of child who unemployed or out of school aged 15-17, logistic regression is used to fit an additive model for the log-odds of this outcome for each combination of gender, religion and sub district. The models fit the data quite well and show how different among demographic groups have prevalence of non-attendance, and clearly indicate that some gender-religious groups have high levels of non-attendance in some districts, but others have not. This study raise questions on social and education policies that can be encourage child to be in school.
