List of Figures	xv
Chapter	
1. Introduction	1
1.1. Background and rationale	1
1.2. Literature review	6
1.3. Objectives	9
2. Methodology	10
2.1. Modeling Incidence Rates of Terrorism Injuries in Southern Thailand	10
2.1.1. Data and Variables	10
2.1.2. Statistical Methods	12
2.1.3. Statistical Graphics	13
2.2. Graphing Incidence Rates over Regions using R and Google Earth	17
2.2.1. Illustrative Data	18

2.2.2. Statistical Model	18
2.2.3. GIS Thematic Map	20
2.2.4. Interactive GIS Graphic System	21
3. Study results	25
3.1. Modeling Incidence Rates of Terrorism Injuries in Southern Thailand	26
3.2. Graphing Incidence Rates over Regions using R and Google Earth	33
4. Conclusion	42

Pattani Campus*

## List of Figures

	<b>Page</b>
Figure 1.1 Franz Müller-Lyer's image	2
Figure 2.1 Comparison of risks of injury from terrorism in southern Thailand for Muslim and non-Muslim residents by gender and age group	14
Figure 2.2 Bubble chart comparing risks of injury from terrorism in Southern Thailand for Muslim and non-Muslim residents by region and year	15
Figure 2.3: Adjusted incidence rates with confidence intervals from negative binomial model	16
Figure 2.4: Plots of incidence rates comparing negative binomial and log-normal models (left panel) and corresponding confidence interval widths (right panel).	17
Figure 2.5: Estimates of annual incidence rates per 100,000 population of injury to civilian non-Muslim residents of the terrorism target area in Southern Thailand, classified by gender and region after adjusting for year (2004-2009) and age group (<15, 15-44, 45+). The horizontal red line denotes the overall mean incidence rate and the grey horizontal lines denote the rates for males and females, respectively. The vertical lines denote 95% confidence intervals for differences between the incidence rates and the overall mean.	19

## List of Figures (cont.)

	<b>Page</b>
Figure 2.6: Simple thematic map of the 15 regions in the Southern Thailand terrorism target area, using three colors to classify the terrorism risk for males (left boxes) and females (right boxes) as above average (red), below average (blue) or not evidently different from average (green). The numbers in the legend denote the median incidence rates per 100,000 populations in each of the three groups.	20
Figure 2.7: Google Earth displays of GIS map of terrorism incidence rates to non-Muslim residents in regions of Southern Thailand. The upper panel shows the location of the target area in the Malay Peninsula viewed from a specified location above the Earth's surface, with the graphical user interface in the sidebar to the left of the map that appears when a user double-clicks on the Google Earth icon, and with the graph in Figure 1 appearing as a screen overlay. The lower panel shows additional features that appear when the user selects further menu options, including the simple thematic map in Figure 2.5, and corresponding colour-coded extruded polygons with ground overlays and pop-up boxes giving further details about region characteristics.	22
Figure 4.1: Residuals plots for Poisson, negative binomial and log-normal models.	43
