CHAPTER	
1 INTRODUCTION AND LITERATURE REVIEW	
1.1 Introduction	1
1.2 Trace metals in estuarine lake	3
1.2.1 Inputs of trace metals to lakes	3
1.2.2 Regulation of trace metal in estuary	4
1.3 Flux measurement	5
1.3.1 Diffusive flux	5
1.3.2 Benthic flux	6
1.3.3 Benthic chamber	8
1.4 Metal Analysis	8
1.5 Study site: The Outer Songkhla Lake	8
1.6 Research Objective	10
1.7 Anticipation Outcome	10
2 METHODOLOGY	
2.1 Chemicals and materials	11
2.2 Instruments and Apparatus	11
2.2.1 GFAAS Perkin Elmer model AAnalyst 800	11
2.2.2 FAAS Shimadzu model AA 680 and Varian model Spectra 220	12
2.2.3 Core sampler	12
2.3 Construction the benthic chamber	13

CONTENTS (CONTINUED)

	Page	
2.4	Effect of oxygen and salinity on metal concentrations in overlying water under controlled conditions in Laboratory	14
2.4.1	Effect of aerobic and anaerobic conditions on metals concentrations	14
2.4.2	Effect of salinity on metals concentrations	14
2.5	Benthic fluxes of metals in the Outer Songkhla Lake	15
2.6	Dissolved metals determination	17
2.7	Calculation of Flux	18
2.7.1	Benthic Flux	18
2.7.2	Diffusive Flux	18
2.8	Sediment	19
2.9	Sub sampling of sediment	20
2.10	Sediment digestions	20
2.11	Optimized the temperature program of GFAAS	21
2.12	Quantification of Metals	22
2.13	Method of validation	22
2.13.1	Detection Limit (DL)	22
2.13.2	Precision	23
2.13.3	Recovery	23
2.13.4	Analytical accuracy	24
3.	RESULT AND DISSCUSSION	
3.1	Effect of oxygen and salinity on metals concentration in overlying water under controlled conditions in Laboratory	25
3.1.1	Effect of aerobic and anaerobic conditions on metal concentrations	25
3.1.2	Effect of salinity on metal concentrations	27

CONTENTS (CONTINUED)

	Page
3.2 Benthic chamber experiment	29
3.2.1 Physico-chemical characteristic of overlying water	29
3.2.2 Dissolved trace metals	35
3.2.3 Calculation of Metal Flux	42
3.2.3.1 Benthic Flux	42
3.2.3.2 Diffusive Flux	51
3.3 Metals Profiles in Pore Water and in Sediment	54
3.3.1 Pore water Profiles	54
3.3.2 Sediment Profiles	57
3.4 Optimized the temperature program of GFAAS	61
3.5 Quantification of Metals	61
3.6 Method of validation	64
3.6.1 Detection Limit (DL)	64
3.6.2 Precision	64
3.6.3 Recovery	65
3.6.4 Analytical accuracy	65
4. CONCLUSION	67

LIST OF TABLES

Table	Page
2-1 Temperature Program for the Determination of Cd, Cu, Pb, Fe and Mn	21
3-1 Physico-chemical characteristics of overlying water	29
3-2 The slopes of the regression line and fluxes of Cd, Cu, Pb, Fe and Mn	43
3-3 The slopes of the regression line and fluxes of Cd, Cu, Pb, Fe and Mn	47
3-4 Concentration of Cd, Cu, Pb, Fe and Mn in pore water (nmol L ⁻¹) at Khao-Deang sediments collected on 12 April, 2005	52
3-5 Concentration of Cd, Cu, Pb, Fe and Mn in pore water (nmol L ⁻¹) at Khao-Deang sediments collected on 27 January, 2006	53
3-6 Benthic Fluxes and Diffusive Fluxes of Cd, Cu, Pb, Fe and Mn at Khao-Deang	53
3-7 The operating conditions	61
3-8 Percent recovery of Cd, Cu, Pb, Fe and Mn	65
3-9 Analysis of reference material (MESS-1)	66
A-1 Concentration of Cd, Cu, Pb, Fe and Mn in pore water from different sites	77
A-2 Diffusive flux of metals from different sites	78
A-3 Benthic fluxes of metals from different sites	79
A-4 Different design of benthic chamber	80
A-5 Water qualities in the Outer Songkhla Lake	80
A-6 Concentrations of dissolved Cd, Cu, Pb, Fe and Mn in the Outer Lake	81
A-7 Total Concentration of Cu, Pb, Fe and Mn in sediment from the Outer Lake	81
B-1 The list of chemical reagents	82
B-2 The list of materials	82
B-3 Operating conditions used for GFAAS	83
B-4 Operating conditions used for FAAS	84
C-1 The changes of metal concentration in aerobic and anaerobic condition	85
C-2 The changes of metal concentration in control condition	86
C-3 The changes of Cd concentration in different salinity	87

LIST OF TABLES (CONTINUED)

Table		Page
C-4	The changes of Cu concentration in different salinity	88
C-5	The changes of Pb concentration in different salinity	89
C-6	D.O. changes of the water inside and outside benthic chambers at Kor-Yor (22- 23 January 2005)	90
C-7	D.O. changes of the water inside and outside benthic chambers at Khao-Deang (11-12 April, 2005)	90
C-8	D.O. changes of the water inside and outside benthic chambers at Khao-Deang (25-27 April, 2005)	91
C-9	The pH changes of water inside light and dark benthic chamber at Khao-Deang (11-12 April, 2005)	92
C-10	The pH changes of water inside light and dark benthic chamber at Khao-Deang (25-27 January, 2006)	92
C-11	Conductivity and total dissolved solid changes of water inside and outside benthic chambers at Khao-Deang (25-27 April, 2006)	93
C-12	Salinity and Temperature changes of water inside and outside benthic chambers at Khao-Deang (25-27 April, 2006)	94
C-13	Average concentrations of Cd, Cu, Pb, Fe and Mn (nmol L ⁻¹) in water samples at Kor-Yor collected on 22-23 January 2005	95
C-14	Average concentrations of Cd, Cu, Pb, Fe and Mn (nmol L ⁻¹) in water samples at Khao - Deang collected on 11-12 April, 2005	95
C-15	Average concentrations of Cd, Cu, Pb, Fe and Mn (nmol L ⁻¹) in water samples at Khao-Deang collected on 25-27 January, 2006	96
C-16	The absorbance of 2 µg. L ⁻¹ of Cd at the difference ashing and atomizing temperatures.	97
C-17	The absorbance of 25 µg.L ⁻¹ of Cu at the difference ashing and atomizing temperatures	97
C-18	The absorbance of 50 µg.L ⁻¹ of Pb at the difference ashing and atomizing temperatures	98

LIST OF TABLES (CONTINUED)

Table		Page
C-19	The absorbance of 20 $\mu\text{g.L}^{-1}$ of Fe at the difference ashing and atomizing temperatures	98
C-20	The absorbance of 25 $\mu\text{g.L}^{-1}$ of Mn at the difference ashing and atomizing temperatures	99
C-21	The Cd result of the standard addition in estuarine water sample	99
C-22	The Cu result of the standard addition in estuarine water sample	100
C-23	The Pb result of the standard addition in estuarine water sample	100
C-24	The Fe result of the standard addition in estuarine water sample	100
C-25	The Mn result of the standard addition in estuarine water sample	101
C-26	Detection limit ($\mu\text{g L}^{-1}$)	101
C-27	The % RSD calculation from sediment sample	102
C-28	The changes of Cd, Cu, Pb, Mn and Fe absorbance in nanopure-water	102
D-1	The changes of Sr concentration (mg L^{-1}) of the water inside benthic chambers at Kor-Yor (22- 23 January, 2005)	103
D-2	The changes of Sr concentration (mg L^{-1}) of the water inside benthic chambers at Khao-Deang (11-12 April, 2005)	103
D-3	The changes of Sr concentration (mg L^{-1}) of the water inside benthic chambers at Khao-Deang (25-27 January, 2006)	104

LIST OF FIGURES

Figure		Page
1-1	Location of the Outer Songkhla Lake	1
1-2	Schematic representation of the cycling of trace elements in a lake	5
2-1	Pushed core sampler	12
2-2	Lab-built light and dark benthic chamber (Left) and a submersible Pump installed on the wall inside the bucket (Right)	13
2-3	Effect of aerobic and anaerobic condition (Left) and effect of salinity (Right) on metal concentration in overlying water	15
2-4	Location of 2 sampling stations (•), Kor-Yor and Khao-Daeng	15
2-5	Experimental set up showing a benthic chamber in position	16
2-6	Filter water samples	17
2-7	Sediment in Core and overlying water	19
2-8	The sediment was pressed out and sliced in the nitrogen chamber	20
3-1	Effect of oxygen on Cd, Cu and Pb concentration in the overlying water	26
3-2	Concentration of Cd, Cu and Pb in control experiment under anaerobic condition	26
3-3	Cd, Cu and Pb concentrations changes of the water in different salinity	28
3-4	D.O. changes of the water inside and outside benthic chambers at Kor-Yor (22-23 January, 2005)	30
3-5	D.O. changes of the water inside and outside benthic chambers at Khao-Deang (11-12 April, 2005)	31
3-6	D.O. changes of the water inside and outside benthic chambers at Khao-Deang (25-27 January, 2006)	31
3-7	pH changes of overlying water at Khao-Deang in dry season (11-12 April, 2005)	32
3-8	pH changes of overlying water at Khao-Deang in wet season (25-27 January, 2006)	32
3-9	Total dissolved solid of water inside and outside benthic chambers at Khao-Deang (25-27 January 2006)	33

LIST OF FIGURES (CONTINUED)

Figure		Page
3-10	Salinity changes of water inside and outside benthic chambers at Khao-Deang (25-27 January 2006)	34
3-11	Conductivity changes of water inside and outside benthic chamber at Khao-Deang (25-27 January 2006)	34
3-12	Temperature changes of water inside and outside benthic chambers at Khao-Deang (25-27 January 2006)	35
3-13	Average dissolved Cd (nM) inside light and dark benthic chambers at Kor-Yor	36
3-14	Average dissolved Cu (nM) inside light and dark benthic chambers at Kor-Yor	36
3-15	Average dissolved Pb (nM) inside light and dark benthic chambers at Kor-Yor	37
3-16	Average dissolved Fe (nM) inside light and dark benthic chambers at Kor-Yor	37
3-17	Average dissolved Mn (nM) inside light and dark benthic chambers at Kor-Yor	38
3-18	Average dissolved concentration of Cd and Cu (nM) at Khao-Deang in dry season (Left) and wet season (Right)	39
3-19	Average dissolved concentration of Pb and Fe (nM) at Khao-Deang in dry season (Left) and wet season (Right)	40
3-20	Average dissolved concentration of Mn (nM) at Khao-Deang in dry season (Left) and wet season (Right)	41
3-21	Fluxes of Cd ($\text{pmol cm}^{-2} \text{ h}^{-1}$) at Kor-Yor	43
3-22	Fluxes of Cu ($\text{pmol cm}^{-2} \text{ h}^{-1}$) at Kor-Yor	44
3-23	Fluxes of Pb ($\text{pmol cm}^{-2} \text{ h}^{-1}$) at Kor-Yor	45
3-24	Fluxes of Fe ($\text{pmol cm}^{-2} \text{ h}^{-1}$) at Kor-Yor	46
3-25	Fluxes of Mn ($\text{pmol cm}^{-2} \text{ h}^{-1}$) at Kor-Yor	47
3-26	Fluxes of Cd and Cu ($\text{pmol cm}^{-2} \text{ h}^{-1}$) at Khao-Deang	48

LIST OF FIGURES (CONTINUED)

Figure		Page
3-27	Fluxes of Pb and Fe ($\mu\text{mol cm}^{-2} \text{h}^{-1}$) at Khao-Deang	49
3-28	Fluxes of Pb and Fe ($\mu\text{mol cm}^{-2} \text{h}^{-1}$) at Khao-Deang	50
3-29	Depth profiles of Cd and Cu in pore water at Khao-Deang. Also showed are overlying water column concentration at a depth of 0 cm.	55
3-30	Depth profiles of Pb and Fe in pore water at Khao-Deang. Also showed are overlying water column concentration at a depth of 0 cm.	56
3-31	Depth profiles of Mn in pore water at Khao-Deang. Also showed are overlying water column concentration at a depth of 0 cm.	57
3-32	Depth profile of Cd concentration (mg kg^{-1}) in sediment at Khao-Deang	58
3-33	Depth profile of Cu and Pb concentration (mg kg^{-1}) in sediment at Khao-Deang	59
3-34	Depth profile of Fe and Mn concentration (mg kg^{-1}) in sediment at Khao-Deang	60
3-35	Comparison Cd standard calibration curve and standard addition curve method of extracted sample	62
3-36	Comparison Cu standard calibration curve and standard addition curve method of extracted sample	62
3-37	Comparison Pb standard calibration curve and standard addition curve method of extracted sample	63
3-38	Comparison Fe standard calibration curve and standard addition curve method of extracted sample	63
3-39	Comparison Mn standard calibration curve and standard addition curve method of extracted sample	64
