Abstract (Thai)	iii
Abstract (English)	iv
Acknowledgements	v
Contents	vi
List of Tables	viii
List of Figures	x
Chapter	
1. Introduction	1
1.1 Introduction	1
1.2 Literatures review	5
1.3 Objectives	9
2. Experimental	10
2.1 Chemical materials and instrumentations	10
2.2 Analysis method	11
2.2.1 Optimization of gas chromatographic conditions	11
2.2.2 Linear dynamic range	14
2.2.3 Detection limit	14
2.3 Sample Preparation	15
2.3.1 Preparation of Amberlite XAD-2 glass column	15
2.3.2 Ultrasonic extraction	16
2.3.3 Optimization of sample preparation step	17
2.3.4 Qualitative and quantitative analysis	19
3 Results and discussions	20
3.1 Optimization of gas chromatographic conditions	20
3.2 Linear dynamic range	43
3.3 Detection limit	45
3.4 Optimization of sample preparation step	46

Contents (cont.)

	Page
3.4.1 Sequencing of conditioning solvents series	46
3.4.2 Extraction solvent	47
3.4.3 Extraction time	47
3.4.4 Volume of extraction solvent	48
3.4.5 Numbers of extraction	49
3.4.6 Volume of spiked water	50
3.5 Qualitative and quantitative analysis	50
4 Conclusions	56
References	58
Appendix	61
Vitae	63

List of Tables

Table		Page
1	LD ₅₀ of dioxins on various species	2
2	Toxic Daily Intake (TDI) of dioxins from various source	3
3	The International Toxicity Equivalency Factor (I-TEF)	6
4	Ontario's standards for dioxins	7
5	Sampling sites	19
6	Relationship of carrier gas flow rate, HETP and retention time	24
7	The number of theoretical plates at various carrier gas flow rates	25
8	Relative response of MSD detector to various initial temperatures	26
9	Relative response of detector to various the hold time for initial temperature	28
10	Relative response of the detector to various first ramped rate	30
11	Relative response of the detector to various second program temperature	31
12	Relative response of the detector to second program temperature holding time	33
13	Relative response of the detector to various second ramped rate	34
14	Relative response of the detector to various third temperature program	36
15	Relative response of the detector to various third stage program temperature hold time	37
16	Relative response of the detector to various third ramped rate	39
17	Relative response of the detector to various inlet temperatures	41
18	Relative response of the detector to various interface temperatures	43
19	Relative response of the detector to various concentration	44
20	Extraction efficiency of sequencing solvent series	46
21	Extraction efficiency of various extraction solvent	47
22	Extraction efficiency of various extraction time	48
23	Extraction efficiency of various volume of solvent	48
24	Extraction efficiency of different number of extractions	49

List of Tables (cont.)

Table		Page
25	Contaminated concentration from blank sample using different number of extractions	49
26	Extraction efficiency of when using different volume of the TCDD water sample	50
27	Concentration of water samples	51
28	Standard addition method of Sample No. 1:Hatyai Regional Water Supply	52
29	Standard addition method of Sample No. 2:Location A-Songkhla Monitoring Municipal Landfill	53
30	Standard addition method of Sample No. 3:Location B-Songkhla Monitoring Municipal Landfill	54
31	TCDD concentrations of samples determined by standard addition method	55
32	Number of Dioxins Congeners According to Degree of Chlorination	61
33	Physical – Chemical Properties of Dioxins	61

List of Figures

Figure		Page
1	The structure of Polychlorodibenzo- <i>p</i> -dioxins, PCDDs	3
2	Analytical calibration curve of signal, X , vs. concentration, C , showing the relationship of kS_b to the limit of detection, C_L	15
3	XAD-2 column	16
4	The sampling location of Songkhla Monitoring Municipal Landfill	19
5	The van Deemter Plot changes in h versus linear gas velocity	21
6	Measurements used in calculating total theoretical plate	23
7	The van Deemter Plot	24
8	Temperature programming in Program 1	25
9	Relative response of MSD detector to various initial temperatures	27
10	Temperature programming in Program 2	27
11	Relative response of detector to various the hold time for initial temperature	28
12	Temperature programming in Program 3	29
13	Relative response of the detector to various first ramped rate	30
14	Temperature programming in Program 4	31
15	Relative response of the detector to various second program temperature	32
16	Temperature programming in Program 5	32
17	The relative detector response : various holding time of second program temperature	33
18	Temperature programming in Program 6	34
19	Relative response of the detector : various ramp to the third stage temperatures	35
20	Temperature programming in Program 7	35
21	Relative response of the detector to various third temperatures	36
22	Temperature programming in Program 8	37

List of Figures (cont.)

Figure		Page
23	Relative response of the detector to various third stage program temperature holding time	38
24	Temperature programming in Program 9	38
25	Relative response of the detector to various third ramped rate	39
26	The optimized program temperature	40
27	Chromatogram of 1 ppb Dioxin (TCDD)	40
28	Relative response of the detector to various inlet temperatures	42
29	Relative response of the detector to various the interface temperatures	43
30	Relative response of the detector to various concentration	44
31	The standard addition curves of TCDD for Sample No. 1	52
32	The standard addition curves of TCDD for Sample No. 2	53
33	The standard addition curves of TCDD for Sample No. 3	54
34	Amberlite XAD-2 polymeric adsorbent	62
