LIST OF TABLES	xv
LIST OF FIGURES	xvi
LIST OF ABBREVIATIONS AND SYMBOLS	xviii
CHAPTER	
1. INTRODUCTION	
1.1 General introduction	1
1.2 Physiological functions	4
1.2.1 To hole the cell in aerobic environment	4
1.2.2 To colonize on food and substrate	4
1.2.3 Prevent potential competitor	4
1.2.4 Protect from ultraviolet radiation (UV)	5
1.2.5 Help retain moisture	5
1.3 Properties of bacterial cellulose	5
1.4 Structure of bacterial cellulose	6
1.5 Biochemistry of bacterial cellulose synthesis	9
1.5.1 Carbon metabolism in <i>Acetobacter xylinum</i>	9
1.5.2 Cellulose synthesis in <i>Acetobacter xylinum</i>	9
1.5.3 Cellulose synthase (CS)	11
1.5.4 Mechanism of bacterial cellulose biosynthesis	11
	vii

## CONTENTS (Continued)

	<b>Page</b>
1.5.4.1 Mechanism of $\beta$ -1,4-glucan polymerization	12
1.5.4.2 Assembly and crystallization of cellulose chains	12
1.6 Bacterial cellulose productions	18
1.6.1 Stationary culture conditions	18
1.6.2 Agitated culture conditions	19
1.6.3 Horizontal fermentors	20
1.7 Factor effecting growth and cellulose production	21
1.7.1 Isolation from natural sources and improvement of bacterial cellulose producing strains	21
1.7.2 Carbon and nitrogen sources	22
1.7.3 Effect of pH and temperature	24
1.7.3 Fermentor types	24
1.8 Bacterial cellulose purifications	24
1.9 Applications of bacterial cellulose	26
1.9.1 Filter membranes	26
1.9.2 Paper industries	27
1.9.3 Food industries	28
1.9.4 Miscellaneous uses	28

## CONTENTS (Continued)

	<b>Page</b>
1.9.5 Medical applications	29
1.9.5.1 Bacterial cellulose as a potential scaffold for tissue engineering of cartilage	29
1.9.5.2 Bacterial cellulose as a potential wound dressing	30
1.10 Topical antimicrobial agents used in burn wounds	32
1.11 Chlorhexidine	34
1.11.1 Chlorhexidine gluconate	35
1.11.2 Chlorhexidine acetate	35
1.11.3 Chlorhexidine hydrochloride	35
1.11.4 Chlorhexidine digluconate	36
1.12 Aims and scope of this thesis	37
<b>2. MATERIALS AND METHODS</b>	
2.1 Preparation of <i>Acetobacter xylinum</i> TISTR 975 preculture and bacterial cellulose (BC) production	38
2.1.1 Growing <i>A. xylinum</i> TISTR 975 from lyophilized stock	38
2.1.2 Preparation of preculture of <i>A. xylinum</i> TISTR 975 for bacterial cellulose production	38

## CONTENTS (Continued)

	<b>Page</b>
2.1.3 Bacterial cellulose production from different carbon sources	39
2.2 Evaluation of bacterial cellulose properties	40
2.2.1 Weight of bacterial cellulose dry film	40
2.2.2 Thickness of bacterial cellulose dry film	40
2.2.3 Percent yield of bacterial cellulose dry film	40
2.2.4 Observation of bacterial cellulose fiber under scanning electron microscope (SEM)	40
2.2.5 Observation of crystallinity of bacterial cellulose dry film by X-ray diffractometer (XRD)	41
2.2.6 Evaluation of Tensile strength of bacterial cellulose films	41
2.2.7 Nitrogen adsorption isotherm and pore size distributions of bacterial cellulose films	42
2.2.8 Water loss and water reabsorption ability of bacterial cellulose wet films	42
2.2.9 Moisture adsorption isotherm of bacterial cellulose at various relative humidity (RH)	43
2.3 Preparation and evaluation of bacterial cellulose film containing chlorhexidine digluconate	44
2.3.1 Antimicrobial activity of chlorhexidine digluconate	44

## CONTENTS (Continued)

	<b>Page</b>
2.3.1.1 Tested of antimicrobial activity of chlorhexidine digluconate by agar diffusion method	45
2.3.1.1.1 Chlorhexidine digluconate disk preparation	45
2.3.1.1.2 Preparation of inoculum	45
2.3.1.1.3 Streaking tested microorganisms on the plate	45
2.3.1.1.4 Agar diffusion test	46
2.3.1.2 Minimal inhibitory concentration (MIC) and minimal bactericidal concentration (MBC) of chlorhexidine digluconate to reference strains	47
2.3.1.2.1 Preparation of inoculum	47
2.3.1.2.2 MIC test of chlorhexidine digluconate to reference strains	47
2.3.1.2.3 MBC test of chlorhexidine digluconate to reference strains	47
2.3.1.3 Tested of antimicrobial activity of bacterial cellulose disk containing chlorhexidine digluconate	47
2.3.2 Preparation of bacterial cellulose films containing chlorhexidine digluconate	48

## CONTENTS (Continued)

	<b>Page</b>
2.3.2.1 <i>In vitro</i> chlorhexidine digluconate release using Franz diffusion cell	48
2.3.2.2 Determination of chlorhexidine digluconate content in the bacterial cellulose film	49
2.3.2.3 Observation of bacterial cellulose film containing chlorhexidine digluconate under SEM	49
<b>3. RESULTS</b>	
3.1 Evaluation of bacterial cellulose properties	50
3.1.1 Dry-weight, thickness and percent yield of bacterial cellulose dry films	50
3.1.2 Observation of bacterial cellulose dry films under scanning electron microscope (SEM)	53
3.1.3 Crystallinity of bacterial cellulose dry films by X-ray diffractometer (XRD)	56
3.1.4 Tensile strength of bacterial cellulose films	59
3.1.5 Nitrogen adsorption isotherm and pore size distributions of bacterial cellulose films	60
3.1.6 Percent of water loss and percent water readsorption of bacterial cellulose wet film	65

## CONTENTS (Continued)

	<b>Page</b>
3.1.7 Moisture adsorption isotherm of bacterial cellulose at various relative humidities (RH)	
3.2 Antimicrobial activity of chlorhexidine digluconate	69
3.3 Chlorhexidine digluconate content and percent accumulative of chlorhexidine digluconate released from bacterial cellulose film	72
3.4 Scanning electron microscope of bacterial cellulose film containing chlorhexidine digluconate	75
<b>4. DISCUSSIONS</b>	
4.1 Production and evaluation of bacterial cellulose film	77
4.2 Observation of bacterial cellulose fiber under scanning electron microscope (SEM)	78
4.3 Crystallinity of bacterial cellulose by X-ray diffractometer (XRD)	80
4.4 Tensile strength of bacterial cellulose production produced from different carbon sources	81
4.5 The nitrogen adsorption isotherm and pore size distribution of bacterial cellulose films	82
4.6 Percent of water loss and percent water readsorption of bacterial cellulose wet film	83
4.7 The moisture adsorption isotherm of bacterial cellulose	84

## CONTENTS (Continued)

	<b>Page</b>
4.8 Antimicrobial activity of chlorhexidine digluconate	86
4.9 Chlorhexidine digluconate content in the film and chlorhexidine digluconate releasing study	87
5. CONCLUSIONS	89
6. BIBLIOGRAPHY	91
APPENDIX	105
VITAE	112

## LIST OF TABLES

Table	Page
1. Dry-weight, thickness and percent yield of bacterial cellulose dry films from different carbon sources (area 63.58 cm <sup>2</sup> ) (mean ± SD, n = 6)	52
2. Percent crystallinity of bacterial cellulose dry films from different carbon sources	58
3. Maximum Load, Extension at Break and Tensile strength of bacterial cellulose films from different carbon sources (mean ± SD, n = 5)	59
4. Percent of water loss and percent of water readsorption of bacterial cellulose wet films after drying at 50°C for 2, 4, 6, 8, 10, 12, 14, 16, 20 and 24 h, respectively (mean ± SD, n = 6)	66
5. Antimicrobial activity of chlorhexidine digluconate (mean ± SD, n = 3)	70
6. Antimicrobial activity of bacterial cellulose disk containing chlorhexidine digluconate (mean ± SD, n = 3)	71

## LIST OF FIGURES

Figure	Page
1. Bacterial cellulose dry films from different carbon sources: (A) glycerine; (B) mannitol; (C) sucrose; (D) glucose and (E) fructose	51
2. Scanning electron micrograph of bacterial cellulose dry films from different carbon sources: (A) glycerine; (B) mannitol; (C) sucrose; (D) glucose and (E) fructose	54
3. X-ray diffraction patterns of bacterial cellulose dry films from different carbon sources: (—) glycerine; (—) mannitol; (—) fructose; (—) glucose and (—) sucrose	57
4. Nitrogen adsorption isotherms of bacterial cellulose films from different carbon sources: (■) glycerine; (■) mannitol; (■) sucrose; (■) glucose and (■) fructose	61
5. Pore size distributions of bacterial cellulose films from different carbon sources: (A) glycerine; (B) mannitol; (C) sucrose; (D) glucose and (E) fructose	62
6. Percent moisture adsorption of bacterial cellulose films from different carbon sources: (—) glycerine; (—) mannitol; (—) sucrose; (—) glucose and (—) fructose at various relative humidities.	68

## LIST OF FIGURES

Figure	Page
7. The inhibition zone of chlorhexidine digluconate to <i>Pseudomonas aeruginosa</i> ATCC 27853	70
8. The inhibition zone of bacterial cellulose disk containing chlorhexidine digluconate to <i>Pseudomonas aeruginosa</i> ATCC 27853	71
9. The content of chlorhexidine digluconate on bacterial cellulose films from different carbon sources (surface area 1 cm <sup>2</sup> ) (mean ± SD, n = 3)	73
10. Percent accumulative of chlorhexidine digluconate released from bacterial cellulose films from different carbon sources: (■) glycerine; (■) mannitol; (■) sucrose; (■) glucose and (■) fructose (mean ± SD, n = 6)	74
11. The scanning electron micrograph of (A) BC film from glycerine; (B) BC films from glycerine containing chlorhexidine digluconate	74

## LIST OF ABBREVIATIONS AND SYMBOLS

°C	degree Celcius
CFU	colony forming unit
cm	centimeter
g	gram
h	hour
l	liter
N	newton
mg	milligram
ml	milliliter
mm	millimeter
min	minute
nm	nanometer
rpm	round per minute
w/v	weigh by volume
w/w	weight by weight
μg	microgram
μl	microliter
μm	micrometer
%	percent
