Contents	(viii)
List of tables	(xii)
List of figures	(xiii)
Chapter	
1. Introduction	1
Literature review	3
1. Lipid oxidation	3
1.1 Initiation	3
1.2 Propagation	3
1.3 Termination	4
1.4 Factors influencing the rate of lipid oxidation	4
2. Antioxidants	7
2.1 Classification of food antioxidants	7
2.2 Mode of action of antioxidants in food	8
2.3 Type of antioxidants	11
3. The utilization of shrimp wastes	13
4. Protein concentrate	15
4.1 Type of protein concentrate	15
4.2 The production of fish protein concentrate	15
5. Protein hydrolysate	17
5.1 The production of fish protein hydrolysate	17
5.2 Enzymatic hydrolysis process of fish proteins	19
5.3 Functional properties of protein hydrolysate	23
6. Antioxidative activity of protein hydrolysate	28
6.1 Mode of action of fish protein hydrolysates	28
6.2 Amino acids and peptides with antioxidative activity	30
Objective	34

CONTENTS (Continued)

	Page
2. Materials and methods	35
1. Materials/Chemicals/Enzyme	35
2. Instruments	36
3. Methods	36
3.1 Proximate analysis and determination of physical properties of Mungoong	36
3.2 Study on the extraction of soluble fraction with antioxidative activity from Mungoong	38
3.3 Effect of the concentration of Mungoong soluble fraction on the antioxidative activities and the correlation between antioxidative activities teste by different assays	40
3.4 Study on stability of soluble fraction from Mungoong	40
3.5 Antioxidative acivity and oxidation stability of Mungoong during storage	41
3.6 Antioxidative activity of soluble fraction from Mungoong in different systems	42
3.7 Study on the use of Flavourzyme on the yield and antioxidative activity of Mungoong	42
4. Statistical analysis	47
3. Results and Discussion	48
1. Composition and some property of Mungoong	48
1.1 Chemical compositions and physical property	48
1.2 Fatty acid profile	49
1.3 Mineral content of Mungoong	50
1.4 Amino acid compositions	52
2. Effect of extracting media on characteristics and antioxidative activity of soluble fraction from Mungoong	54
2.1 UV-absorbance and browning intensity	54
2.2 Fluorescence intensity	55
2.3 DPPH radical scavenging activity	55

CONTENTS (Continued)

	Page
2.4 ABTS radical scavenging activity	56
2.5 Ferric reducing antioxidant power (FRAP)	56
3. Effect of concentrations of water soluble fraction from Mungoong on antioxidative activity and the correlation between antioxidant activities tested by different assays	58
4. pH and thermal stability of water soluble fraction from Mungoong	62
5. Antioxidative activity and oxidative stability of Mungoong during storage	64
5.1 Antioxidative activities	64
5.2 TBA value	66
6. Antioxidative activity of water soluble fraction from Mungoong in different systems	67
6.1 Antioxidative activity in lecithin liposome system	67
6.2 Antioxidative activity in β -carotene linoleic system	69
6.3 Antioxidative activity in comminuted fish model system	70
7. Effect of Flavourzyme on the yield composition and antioxidative activity of Mungoong	72
7.1 Yield of Mungoong from the cephalothorax of white shrimp prepared by different processes	72
7.2 Chemical compositions and physical properties of Mungoong from the cephalothorax of white shrimp prepared by different processes	73
7.3 Nitrogen soluble index of Mungoong from the cephalothorax of white shrimp prepared by different processes	75
7.4 Formal nitrogen content, ammonia nitrogen content and amino nitrogen content of Mungoong from the cephalothorax of white shrimp prepared by different processes	76
7.5 Antioxidative activity of water extract of Mungoong from the cephalothorax of white shrimp prepared by different processes	78

CONTENTS (Continued)

	Page
7.6 Fatty acid composition of Mungoong T and Mungoong RF15	80
7.7 Mineral content of Mungoong T and Mungoong RF15	83
4. Conclusion	85
References	86
Appendix	105
Vitae	114

LIST OF TABLES

Table	Page
1. Amino acid sequence of antioxidative peptides from various protein sources	32
2. Chemical compositions and some physical properties of Mungoong from the cephalothorax of white shrimp	49
3. Fatty acid composition of Mungoong from the cephalothorax of white shrimp	51
4. Mineral contents of Mungoong from the cephalothorax of white shrimp	52
5. Amino acid compositions of Mungoong from the cephalothorax of white shrimp	53
6. A_{280} , A_{295} , browning intensity and fluorescence intensity of different soluble fractions of Mungoong produced from the cephalothorax of white shrimp	55
7. Antioxidative activities of soluble fractions of Mungoong produced from the cephalothorax of white shrimp determined by different assays	57
8. Yield of Mungoong prepared by different processes	73
9. Chemical compositions and physical properties of Mungoong from the cephalothorax of white shrimp prepared by different processes	74
10. Formal nitrogen, ammonia nitrogen and amino nitrogen contents of Mungoong from the cephalothorax of white shrimp prepared by different processes	78
11. Fatty acid composition of Mungoong T and Mungoong RF15 from the cephalothorax of white shrimp	82
12. Mineral contents of Mungoong T and Mungoong RF15 from the cephalothorax of white shrimp	84

LIST OF FIGURES

Figure	Page
1. Delocalization of the unpaired electron in the aromatic ring of phenoxy radicals	10
2. Chemical structure of synthetic antioxidants	12
3. Schematic diagram of the process used in the production of protein hydrolysate from spiny dogfish (<i>Squalus acanthias</i>) shark	21
4. Scheme for Mungoong production	44
5. Antioxidative activities of water soluble fraction from Mungoong produced from the cephalothorax of white shrimp at different concentration as determined by the ABTS radical scavenging activity, DPPH radical scavenging activity and FRAP	59
6. Correlation between ABTS and DPPH radical scavenging activity, correlation between FRAP and ABTS radical scavenging activity and correlation between FRAP and DPPH radical scavenging activity of water soluble fraction from Mungoong produced from the cephalothorax of white shrimp	61
7. pH stability of water soluble fraction from Mungoong produced from the cephalothorax of white shrimp	62
8. Thermal stability of water soluble fraction from Mungoong produced from white shrimp cephalothorax	63
9. Changes in DPPH radical-scavenging activity, ABTS radical-scavenging activity and FRAP of water extract obtained from Mungoong stored at room temperature (28-30°C) and 4°C for 8 weeks	65
10. Changes in TBA value of Mungoong during storage at room temperature (28-30°C) and 4°C.	66
11. Change in TBARS value and conjugated diene in lecithin liposome system in the absence or presence of water soluble fraction from Mungoong at different levels	68

LIST OF FIGURES (Continued)

Figure	Page
12. Change in β -carotene bleaching in the absence or presence of water soluble fraction from Mungoong at different levels	70
13. Change in TBARS values of comminuted round scad mince model system in the absence or presence of water soluble fraction from Mungoong at different levels	71
14. Nitrogen solubility index of Mungoong from the cephalothorax of white shrimp prepared by different processes.	76
15. Antioxidative activities of Mungoong from the cephalothorax of white shrimp prepared by different processes.	81
