## LIST OF TABLES

Table	Page
1 Water vapor permeability of various protein films.	7
2 Tensile strength and elongation at break of various films.	8
3 Comparison of specific mechanical and barrier properties of plastic wrap and spray-dried (SD) and flash-dried (FD) wheat gluten films.	18
4 Applications of protein based-films in foods.	28
5 Proximate compositions of surimi from different tropical fish.	43
6 Physical and mechanical properties of surimi film.	46
7 L*, a* and b*-values of surimi film.	50
8 Film solubility and protein solubility of surimi film.	54
9 Tensile strength (TS), elongation at break (EAB), water vapor permeability (WVP) and thickness of bigeye snapper surimi film as affected by types and amounts of lipids.	63
10 Color parameters and transparency of bigeye snapper surimi film as affected by types and amounts of lipids.	67
11 Film solubility and protein solubility of bigeye snapper surimi film as affected by types and amounts of lipids.	69
12 Tensile strength (TS), elongation at break (EAB), water vapor permeability	79

(WVP) and thickness of bigeye snapper surimi film incorporated with palm oil as affected by types and amounts of aldehydes.

- 13 Color parameters and transparency of bigeye snapper surimi film incorporated with palm oil as affected by types and amounts of aldehydes. 81

### **LIST OF TABLES (CONTINUED)**

Table	Page
14 Film solubility and protein solubility of bigeye snapper surimi film incorporated with palm oil as affected by types and amounts of aldehydes.	83
15 Tensile strength (TS), elongation at break (EAB), water vapor permeability (WVP) and thickness of bigeye snapper surimi film incorporated with palm oil as affected by MTGase.	88
16 Color parameters and transparency of bigeye snapper surimi film incorporated with palm oil as affected by MTGase levels.	89
17 Film solubility and protein solubility of bigeye snapper surimi film incorporated with palm oil as affected by MTGase levels.	90
18 Degree of hydrolysis (%) of bigeye snapper surimi films incorporated with oil and/or formaldehyde.	96
19 Protein solubility (%) of bigeye snapper surimi films in various solvents.	98
20 Glass transition temperature ( $T_g$ ) of the control films, films incorporated with palm oil at 75 % glycerol substitution, films incorporated with palm oil at 75 % glycerol and 5 mM formaldehyde.	103
21 Degradation temperature ( $T_d$ ) of the control films, films incorporated with palm oil at 75 % glycerol substitution, films incorporated with palm oil	104

at 75 % glycerol and 5 mM formaldehyde and surimi (unplasticized, without cryoprotactant).

## LIST OF FIGURES

Figure	Page
1 Mechanism of film formation.	6
2 Mechanism of protein cross-linking by formaldehyde, glyoxal or glutaraldehyde.	22
3 Transglutaminase-catalyzed cross-linking reaction in proteins.	25
4 Protein patterns of surimi from different tropical fish.	44
5 Protein patterns of surimi film from bigeye snapper, goat fish and threadfin bream.	52
6 Reducing sugar content of acidic and alkaline film-forming solutions of surimi from different tropical fish with different exposure times.	56
7 Protein patterns of acidic and alkaline film-forming solutions from bigeye snapper surimi, goat fish surimi and threadfin bream surimi with different exposure times.	59
8 Protein patterns of bigeye snapper surimi films incorporated with palm oil, butter and shortening.	70
9 SEM micrographs of bigeye snapper surimi films incorporated without and with palm oils at different levels.	73

10 SEM micrographs of bigeye snapper surimi films incorporated with palm oil, butter and shortening at 75% glycerol substitution.	74
---	----

### **LIST OF FIGURES (CONTINUED)**

Figure	Page
11 Moisture sorption isotherms of bigeye snapper surimi film added with palm oil at 75% glycerol substitution at 4°C and room temperature.	76
12 Protein patterns of bigeye snapper surimi films containing palm oil and incorporated with formaldehyde, glutaraldehyde and glyoxal.	85
13 Protein patterns of bigeye snapper surimi films containing palm oil and added with MTGase at different levels.	91
14 Moisture sorption isotherms of the film incorporated with palm oil and added with 5 mM formaldehyde at 4°C and room temperature.	92
15 SEM micrographs of bigeye snapper surimi films. Control film (without lipid and formaldehyde), film incorporated with palm oil at 75% glycerol substitution and film incorporated with palm oil at 75% glycerol substitution and 5 mM formaldehyde.	94
16 First scan of DSC thermogram of the control film, film incorporated	101

with palm oil at 75 % glycerol substitution and film incorporated with palm oil at 75 % glycerol and 5 mM formaldehyde.

- 17 Second scan of DSC thermogram of the control film, film incorporated with palm oil at 75 % glycerol substitution and film incorporated with palm oil at 75 % glycerol and 5 mM formaldehyde. 101

### **LIST OF FIGURES (CONTINUED)**

Figure	Page
18 TGA thermogram of the control film, film incorporated with palm oil at 75 % glycerol substitution and film incorporated with palm oil at 75 % glycerol and 5 mM formaldehyde.	102
19 Changes in tensile strength and elongation at break of bigeye snapper surimi films containing palm at 75% glycerol substitution and 5 mM formaldehyde during storage at different temperatures and RHs.	106
20 Changes in water vapor permeability of bigeye snapper surimi films containing palm at 75% glycerol substitution and 5 mM formaldehyde during storage at different temperatures and RHs.	107
21 Changes in film solubility of bigeye snapper surimi films containing palm at 75% glycerol substitution and 5 mM formaldehyde during storage at different temperatures and RHs.	107
22 Changes in color of bigeye snapper surimi films containing palm at 75% glycerol substitution and 5 mM formaldehyde during storage at different temperatures and RHs.	109
23 Changes in transparency of bigeye snapper surimi films containing palm	110

at 75% glycerol substitution and 5 mM formaldehyde during storage at different temperatures and RHs.

### **LIST OF FIGURES (CONTINUED)**

Figure	Page
24 Changes in moisture content of dried fish powder packaged using bigeye snapper surimi films incorporated with palm oil at 75% glycerol substitution (SO), bigeye snapper surimi film incorporated with palm oil at 75% glycerol substitution and 5 mM formaldehyde (SOF) or polyethylene film (PE) during storage at 30-32°C.	111
25 Changes in color of dried fish powder packaged using bigeye snapper surimi films incorporated with palm oil at 75% glycerol substitution (SO), bigeye snapper surimi film incorporated with palm oil at 75% glycerol substitution and 5 mM formaldehyde (SOF) or polyethylene film (PE) during storage at 30-32°C.	113
26 Changes in TBARS of dried fish powder packaged using bigeye snapper surimi films incorporated with palm oil at 75% glycerol substitution (SO), bigeye snapper surimi film incorporated with palm oil at 75% glycerol substitution and 5 mM formaldehyde (SOF) or polyethylene film (PE) during storage at 30-32°C.	115
