A Study of Knowledge, Attitudes and Practice on Reproductive Health in Adolescents of the University Students in Songkla Province, Southern, Thailand	
1.1. Introduction	1
1.2. Objectives	3
1.3. Method of Study	3
1.4. Results	4
1.5. Discussion	17
1.6. References	20

List of Tables	Page
Table 1. Demographic data of the studied students	4
Table 2. Distribution of the students' knowledge about reproductive health (per cent)	5
Table 3. Distribution of the students' knowledge of different methods of contraceptions (per cent)	6
Table 4. Distribution of the students' knowledge of sexually transmitted diseases (per cent)	7
Table 5. Distribution of the students' sources of information about reproductive health (per cent)	8
Table 6. Distribution of the students' assessment of the optimum age for a man to get married (per cent)	8
Table 7. Distribution of the students' assessment of the optimum age for a woman to get married (per cent)	9
Table 8. Distribution of the students' attitudes towards men's premarital sexual intercourse (per cent)	9
Table 9. Distribution of the students' attitudes towards women's premarital sexual intercourse (per cent)	9
Table 10. Distribution of the students' reproductive health experiences (per cent)	10
Table 11. Distribution of the students' sexual partners (per cent)	10
Table 12. Distribution of the students' preferred methods of contraceptions when having sexual intercourse (per cent)	11
Table 13. Distribution of the students' decision when unplanned premarital pregnancy occurred (per cent)	11
Table 14. Distribution of the students' preferred methods of dealing symptoms involving genital organs (per cent)	12
Table 15. Distribution of problems that the students concern (per cent)	12
