Table		หน้า
1	Live weight and wholesale cuts weight of feather and naked-neck indigenous chickens	6
2	Proximate compositions of m. Pectoralis major and m. Biceps femoris of indigenous and broiler chickens (mean ± SD)	7
3	Effects of age and rearing systems on live weight, carcass weight and breast (Pectoralis major) weight of Thai indigenous chicken	16
4	Effects of age and rearing system on pH ₂₄ of Pectoralis indigenous chicken muscle	18
5	Effects of age and rearing system on proximate compositions of <i>Pectoralis</i> indigenous chicken muscle	20
6	Effects of age and rearing system on total collagen and soluble collage contents of Pectoralis indigenous chicken muscle	23
7	Effects of age and rearing system on protein composition of <i>Pectoralis</i> indigenous chicken muscle	26
8	Effects of age on protein composition of Pectoralis broiler chicken muscle	27
9	Effects of age and rearing system on L* a* b* of Pectoralis indigenous chicken muscle	33
10	Effects of age and rearing system on L* a* b* of Pectoralis indigenous chicken skin	35
11	Effects of age and rearing system on shear force values and cooking loss of <i>Pectoralis</i> indigenous chicken muscle	37
12	Effects of age and rearing systems on Transformation temperature and denaturation enthalpy of <i>Pectoralis</i> indigenous chicken muscle	41
13	Effects of age and rearing system on microstructure of <i>Pectoralis</i> indigenous chicken muscle	44

สารบัญตารางผนวก

Table		หน้
1	Carcass weight and chemical compositions of Pectoralis broiler chicken muscle at differing	67
	ages	
2	Physical characteristics of Pectoralis broiler chicken muscle at differing ages	68
3	Transformation temperature and denaturation enthalpy of Pectoralis broiler chicken muscle	69
	at differing ages	
4	Fiber diameter, sarcomere length and perimysium thickness of Pectoralis broiler chicken	71
	muscle at differing ages	

สารบัญภาพ

Figure		หน้า
1	Live weight and carcass weight of pectoralis muscles at differing ages of broiler and Thai indigenous chicken reared under intensive and extensive systems	17
2	pH ₂₄ of <i>pectoralis</i> muscles at differing ages of broiler and Thai indigenous chicken reared under intensive and extensive systems	19
3	Proximate compositions of <i>pectoralis</i> muscles at differing ages of broiler and Thai indigenous chicken reared under intensive and extensive systems	22
4	Total collagen (mg/g muscle) and soluble collagen content (% of total) of pectoralis muscles at differing ages of broiler and Thai indigenous chicken reared under intensive and extensive systems	24
5	SDS-PAGE patterns of pectoralis muscles from differing ages (6-24 weeks) of indigenous chicken rearing under intensive and extensive system (M = molecular weight standard)	28
6	SDS-PAGE patterns of sarcoplasmic protein fractions of <i>pectoralis</i> muscles from differing age (6, 16 and 24 weeks) of indigenous chicken rearing under intensive and extensive system (M = molecular weight standard)	29
7	SDS-PAGE patterns of muscles (A) and sarcoplasmic protein fractions (B) from pectoralis muscles of broiler at differing ages 2, 4, 6, 8, 10 and 12 weeks (M = molecular weight standard)	30
8	Color profile (L*, a*, b*) of pectoralis muscles at differing ages of broiler and Thai indigenous chicken reared under intensive and extensive systems	34
9	Color profile (L*, a*, b*) of pectoralis muscle skins at differing ages of broiler and Thai indigenous chicken reared under intensive and extensive systems	36
10	Shear force values of raw and cooked pectoralis muscles at differing ages of broiler and Thai indigenous chicken reared under intensive and extensive systems	38
11	Cooking loss of <i>pectoralis</i> muscles at differing age of broiler and Thai indigenous chicken reared under intensive and extensive systems	39
