CHAPTER	
1 INTRODUCTION	1
1.1 Overview	1
1.2 Literature review	3
1.3 Physical and chemical properties of mercury	4
1.4 Uses of mercury	6
1.5 Amalgam filling and chemical reactions	7
1.6 Bioavailability, mercury absorption metabolism and health effect	8
1.7 Occupational exposure	9
1.8 Human hair	11
1.8.1 Hair structure and binding with mercury	11
1.8.2 Advantage of analysis of mercury in human hair	11
1.9 Analytical method	12
1.10 Research Objectives	14
1.11 Anticipated Outcome	14
2 METHODOLOGY	15
2.1 Chemical and material	15
2.2 Instrument; Mercury Analysis System FIMH 400 (Perkin Elmer)	15
2.3 Sample Collection	15
2.3.1 Hair samples	15
2.3.2 Questionnaires	16
2.4 Optimization of Analytical Procedures	17
2.4.1 Reagent for pre-cleaned process	17
2.4.2 Drying temperature	17

CONTENTS (Continued)

	Page
2.4.3 Acid for digestion	17
2.4.4 Digestion times	18
2.4.5 Digestion procedure	18
2.5 Optimization the mercury analysis system	18
2.5.1 Effect of NaBH ₄ concentration	19
2.5.2 Effect of HCl concentration	19
2.6 Quantification of the analyses	19
2.7 Analytical performance characteristics	19
2.7.1 Detection limit	20
2.7.2 The linear dynamic range (Linearity)	20
2.7.3 Accuracy	20
2.7.4 Precision	21
2.7.5 Recovery test	21
2.8 Statistical analyses	22
3. RESULTS AND DISCUSSION	23
3.1 Optimization the analytical reagents for mercury analysis by FIMH-400	23
3.1.1 Effect of NaBH ₄ concentration	23
3.1.2 Effect of HCl concentration	24
3.2 Optimization of the analytical procedure	24
3.2.1 Reagents for pre-cleaned process	24
3.2.2 Drying temperature	25
3.2.3 Acid for digestion	26
3.2.4 Digestion times	27
3.3 Analytical Performance characteristics	28
3.3.1 Detection limit	28
3.3.2 Linearity	29

CONTENTS (Continued)

	Page
3.3.3 The recovery test Accuracy	29
3.3.4 Accuracy	30
3.3.5 Precision	30
3.4 Quantification of the analyses: standara addition method	30
3.5 Mercury concentration in hair of dental personnel and Hat-Yai residents	31
3.6 Statistical analyses	33
3.6.1 Life style	34
3.6.2 Work habits	35
3.6.3 Dental filling	36
3.6.4 Precautionary measures	37
4 CONCLUSION	38
BIBLIOGRAPHY	39
APPENDICES	46
A	47
B	50
C	55
D	58
VITAE	62

LIST OF TABLES

Table		Page
1-1	Selected physical and chemical properties of elemental mercury	5
1-2	Consumption of refined mercury in the USA between 1985 and 2001 (metal values are in metric tons)	6
1-3	Mercury concentration in human hair from various countries	12
2-1	Summary of the categories included in the questionnaire	16
3-1	Measurements of Hg in certified reference material	28
3-2	The recovery tested	29
3-3	Measurements of Hg concentration in Certified reference material (BCR-397)	30
3-4	The mercury concentration ($\mu\text{g g}^{-1}$) in hair of dental personnel and Hat-Yai residents	33
3-5	Life styles	35
3-6	Work habits	36
3-7	Dental filling	37
3-8	Precautionary measures	37
A-1	Chemicals analytical grade using in this study	47
A-2	FI-MH-AAS recommended analytical parameters for mercury	48
A-3	Programming for the FIAS-400	49
D-1	Absorbance of mercury produced from different NaBH_4 concentration analysis by FIMH 400 Cold Vapor Atomic Absorption Spectroscopy	58
D-2	Effect of HCl concentration on mercury analysis by FIMH 400 Cold Vapor Atomic Absorption Spectroscopy	58
D-3	Effect of reagent for precleaned process on mercury analysis by FIMH 400 Cold Vapor Atomic Absorption Spectroscopy	58
D-4	Effect of drying temperature on mercury analysis by FIMH 400 Cold Vapor Atomic Absorption Spectroscopy	59
D-5	Effect of acids using in digestion process on the analytical results analysis by Perkin Elmer FIMH 400 cold vapor Atomic Absorption	59

LIST OF TABLES (Continued)

Table		Page
D-6	Effect prolonged half power of digestion times, after 90 seconds full power, on analytical results by Perkin Elmer FIMH 400 Cold Atomic Absorption Spectrometry	59
D-7	Calibration curve	59
D-8	Linear dynamic range for FI-MH-AAS	60
D-9	The % RSD calculation from hair sample	60
D-10	Mercury concentration in samples ($\mu\text{g g}^{-1}$)	61

LIST OF FIGURES

Figure		Page
1-1	Amalgam Filling	7
1-2	Mercury pathway in dentistry	10
3-1	Effect of NaBH ₄ concentration on mercury analysis by Perkin Elmer FIMH 400 Cold Vapor Atomic Absorption Spectrometry	23
3-2	Effect of HCl concentration on mercury analysis by Perkin Elmer 400 Cold Vapor Atomic Absorption Spectrometry	24
3-3	Effect of pre-washed reagents to the analytical results by FIMH 400 Cold Vapor Atomic Absorption Spectrometry	25
3-4	Effect of drying temperatures on the analytical results by Perkin Elmer FIMH 400 Cold Vapor Atomic Absorption Spectrometry	26
3-5	Effect of acids using in digestion process on the analytical results analysis by Perkin Elmer FIMH 400 Cold Vapor Atomic Absorption Spectrometry	27
3-6	Effect prolonged half power of digestion times, after 90 seconds full power, on analytical results by Perkin Elmer FIMH 400 Cold Vapor Atomic Absorption Spectrometry	28
3-7	Calibration curve	29
3-8	Comparison standard calibration curve and standard addition curve for hair sample	31
3-9	Box and outlier plot presents Q ₁ , Q ₂ and Q ₃ of Hg level in different groups of dental personnel and Hat-Yak resident's hair	32
A-1	Cold Vapor Atomic Absorption Spectrometry (CVAAS FIMH-400 Perkin Elmer)	48
C-1	Teflon bomb	55
C-2	The bomb containing the mixtures in a microwave pressure cooker	56
C-3	The microwave pressure cooker in an unmodified domestic microwave	56
